***Allowance of Application # 09/804,869***

1. The following communication is in response to applicant's amendment received 7-February-2005.

***Reasons for Allowance***

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the inventions described in U.S. Patent Nos. 6,670,693 to Singh et al., and 5,808,616 to Shimiza et al), the improvement comprising a method for section cutting and analysis of a computer model of a structural member by locating at least first and last cutting planes on the computer model to define a cutting path, automatically generating at least one section along the cutting path and analyzing the section using computer aided engineering (CAE) analysis to determine whether the section meets predetermined criteria, modifying the section if the predetermined criteria is not met, and using the section in the model design if the predetermined criteria is met. This patentable distinction is included in each of the independent claims, nos. 5 and 15. The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <method for section cutting and analysis of a computer model of a structural member> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 6, line 19 through page 21, line 13, and Figures 1-8. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.
